

HVAC

*Our Focus
within
the HVAC
Industry*

Overview **We're a Well-Kept Secret**

Though you may not know our name, we've been innovating answers to some of the world's toughest motion-control challenges for more than 50 years. We manufacture our own drives right here in the USA and have done so since we pioneered one of the industry's first electric servo drives back in 1967. Our expertise has been built one system at a time through thousands of widely ranging applications.

We're Problem Solvers, Not Commodity Suppliers

We don't just provide drives. We provide comprehensive, individualized solutions tailored to your application—solutions that economically address all of today's HVAC issues, including power quality, energy savings, integration, and environmental packaging. As a result, you get the best value from a single source. While we can certainly handle a simple fan, our niche is specialized, complex applications.

We're a Resource—Turn to Us

Uncertain about harmonic issues? Confused about packaging alternatives or other concerns? We've been tackling these topics for decades. Turn to us when standard, out-of-the-box solutions aren't good enough. We simplify the complex. And, unlike other companies, our engineering expertise is highly accessible. We also design and build custom inverters and custom packages that meet the design and criteria of a customer.

We Engineer Packaged Drive Systems

We package drive systems that are tailored to your specifications. As a matter of course, our systems incorporate features that other companies consider special requests. We've done the engineering up front so you don't have to.

We Offer the Smartest Pumping Solutions

Our revolutionary Synthesis™ intelligent pump controllers dramatically simplify pumping systems by integrating essential motor, logic, and process control functions into a single economical unit. Whether for a simple pump or a complex, coordinated system, Synthesis™ optimizes performance at both the pump and system levels. Synthesis™ controllers incorporate our innovative Pumping System Intelligence™ (PSI) that models pump behavior to achieve optimal pressure, flow, or level control, maximum efficiency, and extended equipment life with any pump.
